TALK OUTLINE

Goal: Extend our *multi-floor* dialogue annotation schema to account for features of *situated* dialogue—interpretation draws upon info from physical environment, conversational history, robot's physical form, etc.

1. Multi-floor dialogue

- Introduction
- 2018 unmodified annotation schema

2. Situated dialogue

- Situated human-robot dialogue corpus
- Strengths & weaknesses of original schema annotations as training data

3. Schema Extensions (Paper Focus)

- uniquely mark language that must be grounded to situational context

4. Annotated Corpus:

- Analysis of annotation type frequencies
- Inter-Annotator Agreement

5. Conclusions & Future Work

- Inter-Annotator Agreement

5. Conclusions & Future Work

1. MULTI-FLOOR DIALOGUE: INTRODUCTION

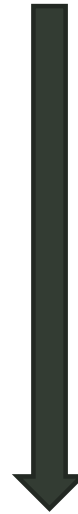

Conversational floor: shares common set of speakers and observers

Multi-floor Dialogue: high-level dialogue purposes are the same, and some content is shared, but other aspects (participant structure, turn-taking expectations) are distinct

Time

I D	Conversational Floor 1		Conversational Floor 2		
	Woman	Server	Server	Cook	Drink Server
1	I'll have a cheeseburger and a small coke				
2		Ah no ah, no coke, pepsi			
3	pepsi				
4			One cheeseburger one pepsi		
5				cheeseburger	
6					pepsi

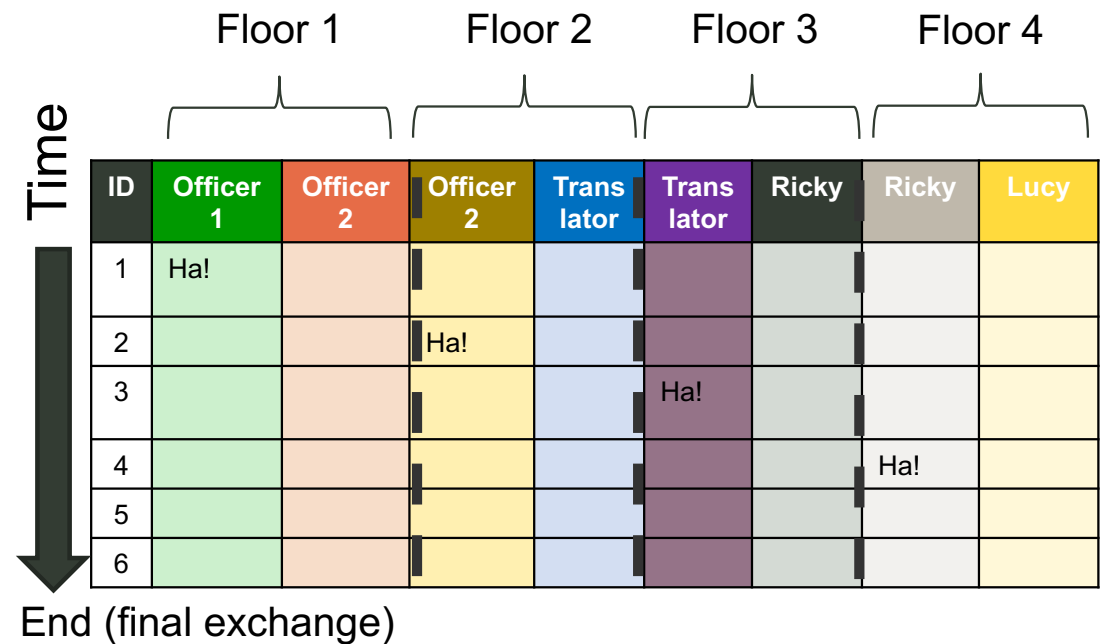

1. MULTI-FLOOR DIALOGUE: INTRODUCTION

Conversational floor: shares common set of speakers and observers

Multi-floor Dialogue: high-level dialogue purposes are the same, and some content is shared, but other aspects (participant structure, turn-taking expectations) are distinct

1. MULTI-FLOOR DIALOGUE: 2018 UNMODIFIED ANNOTATION SCHEMA

Transaction Unit (TU):
a group containing the
initiation and (potential)
fulfillment
of an intent.

- TU 1
1. **Customer:** I'd like a cheeseburger
 2. **Waiter:** one cheeseburger.
 3. **Waiter:** (placing burger in bag) here you go.
 4. **Customer:** thanks!
- TU 2
5. **Waiter:** would you like fries with that?
 6. **Customer:** Sure, a large one please!
 7. **Waiter:** (placing fries box in bag): one large fries.

1. MULTI-FLOOR DIALOGUE: 2018 UNMODIFIED ANNOTATION SCHEMA

Relations: describe the structure between pairs of utterances within a TU

- **Antecedent:** the utterance that a subsequent utterance is addressing (e.g., 2 → 1)
- **Relation-Type:** relationship between utterance and antecedent (e.g., Acknowledgment)

1. **Customer:** I'd like a cheeseburger
2. **Waiter:** one cheeseburger. Acknowledgement
3. **Waiter:** (placing burger in bag) here you go. Acknowledgement
4. **Customer:** thanks! 3rd turn feedback
5. **Waiter:** would you like fries with that? Answer
6. **Customer:** Sure, large please! Answer
7. **Waiter:** (placing fries in bag): one large fries. Acknowledgement

1. MULTI-FLOOR DIALOGUE: 2018 UNMODIFIED ANNOTATION SCHEMA

Relation Super-Types

Expansions - relate utterances produced by the *same* participant within the *same* floor (4 Subtypes)

Responses - relate utterances by *different* participants in the *same* floor (24 Subtypes)

Translations - relate utterances in *different* floors (4 Subtypes)

Example Subtypes:

1. Customer→Waiter: I'll have a cheeseburger
2. Customer→ Waiter: and a small coke Continue

1. Customer→ Waiter: a small coke, please
2. Waiter→Customer: here you go Acknowledgement-done

1. Customer→ Waiter: I'll have a cheeseburger
2. Waiter→Cook: Cheeseburger!! Translation-right

TALK OUTLINE

Goal: Extend our *multi-floor* dialogue annotation schema to account for features of *situated* dialogue—interpretation draws upon info from physical environment, conversational history, robot's physical form, etc.

1. Multi-floor dialogue

- Introduction
- 2018 unmodified annotation schema

2. *Situated* dialogue

- Human-robot dialogue corpus
- Strengths & weaknesses of original schema annotations as training data

3. Schema Extensions (Paper Focus)

- uniquely mark language that must be grounded to situational context

4. Annotated Corpus:

- Analysis of type frequencies
- Inter-Annotator Agreement

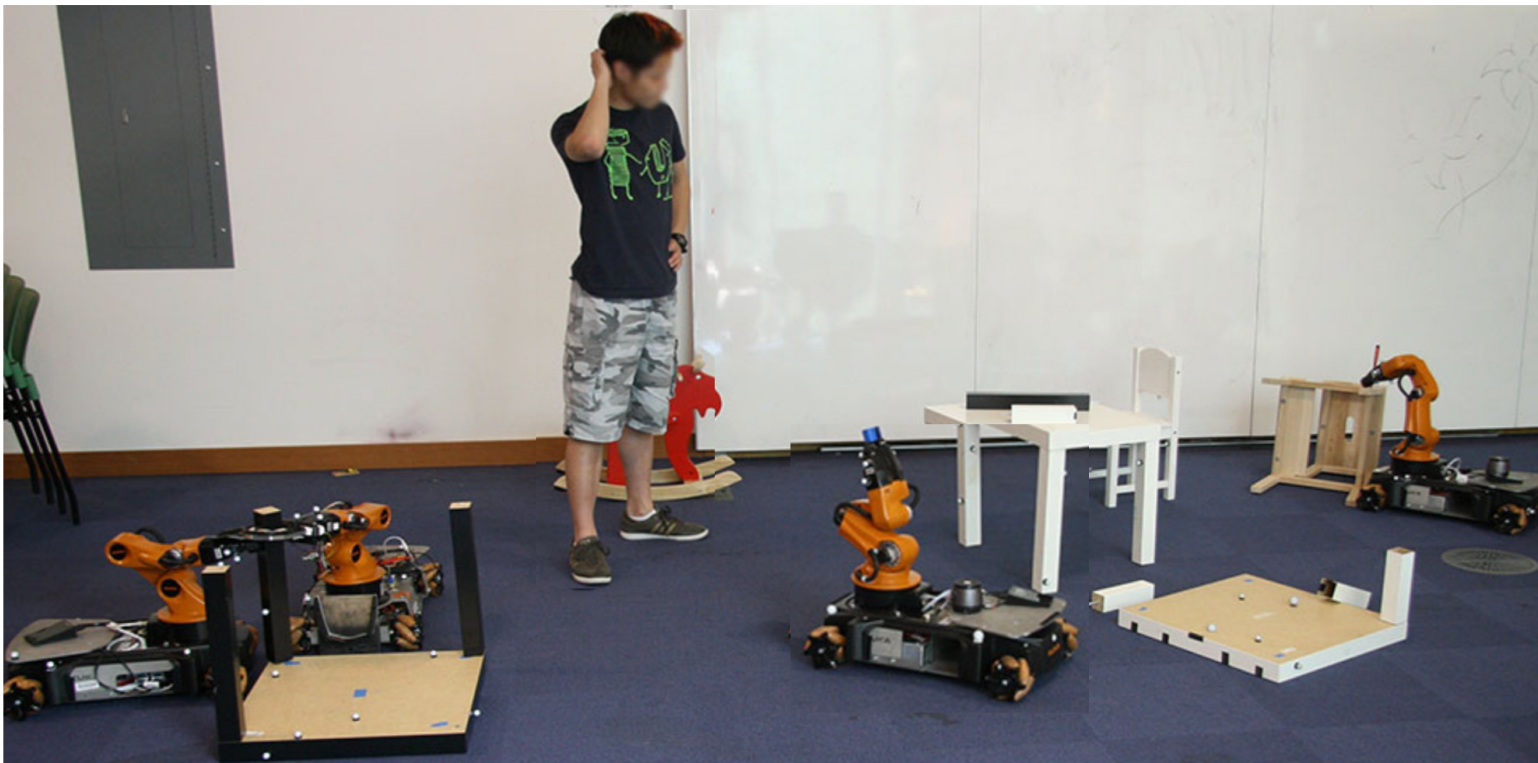

5. Conclusions & Future Work

2. SITUATED DIALOGUE: HUMAN-ROBOT DIALOGUE CORPUS

Goal: Extend our *multi-floor* dialogue annotation schema to account for features of *situated* dialogue—interpretation draws upon info from physical environment, conversational history, robot's physical form, etc.

2. SITUATED DIALOGUE: HUMAN-ROBOT DIALOGUE CORPUS

How might people talk to a robot in a collaborative task?

- **Wizard-of-Oz** methodology: human “wizard” stands in for automated components
- **Phased WoZ**: use data collected in last phase to train additional automated components in next phase (*DeVault et al. 2014, Artstein et al. 2015*)

2. SITUATED DIALOGUE: HUMAN-ROBOT DIALOGUE CORPUS

“Commander” Participant

What the Participant says

speaks verbal instructions

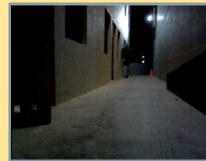

*Travel forward
down the hall*

What the Participant sees

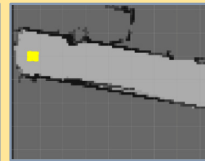

messages from the robot

*How far forward
should I move?*

TALK OUTLINE

Goal: Extend our *multi-floor* dialogue annotation schema to account for features of *situated* dialogue—interpretation draws upon info from physical environment, conversational history, robot's physical form, etc.

1. Multi-floor dialogue

- Introduction
- 2018 unmodified annotation schema

2. Situated dialogue

- Human-robot dialogue corpus
- Strengths & weaknesses of original schema annotations as training data

3. Schema Extensions (Paper Focus)

- uniquely mark language that must be grounded to situational context

4. Annotated Corpus:

- Analysis of type frequencies
- Inter-Annotator Agreement

5. Conclusions & Future Work

1. MULTI-FLOOR DIALOGUE: 2018 UNMODIFIED ANNOTATION SCHEMA

Relation Super-Types

Expansions - relate utterances produced by the *same* participant within the *same* floor (4 Subtypes)

Responses - relate utterances by *different* participants in the *same* floor (~~24 Subtypes~~)

(26 Subtypes) 1. Ack-doing-prep
2. Ack-wilco-prep

Translations - relate utterances in *different* floors (~~4 Subtypes~~)

(10 Subtypes) 1. Translation-r-direct
2. Translation-r-landmark
3. Translation-r-situated
4. Translation-r-default
5. Translation-r-history
6. Translation-r-contextual

Example Subtypes:

1. Customer→Waiter: I'll have a cheeseburger
2. Customer→ Waiter: and a small coke → Continue

1. Customer→ Waiter: a small coke, please
2. Waiter→Customer: here you go → Acknowledgement-done

1. Customer→ Waiter: I'll have a cheeseburger
2. Waiter→Cook: Cheeseburger!! → Translation-right

3. SCHEMA EXTENSIONS: LANDMARK AND DIRECT TRANSLATION EXTENSIONS

TU	ID	Participant (Audio Stream 1)	DM -> Participant (Chat Room 1)	DM-> RN (Chat Room 2)	RN (Audio Stream 2)	Ante- cedent	Relation- Type
1	1	go through the doorway directly in front of you					
1	2	and take a photo				1	continue
1	3		processing. . .			2*	processing
1	4			move into Conf Room		1	translation-r-landmark
1	5			then...		4	link-next
1	6			send image		2	translation-r-direct
1	7		moving. . .			1	ack-doing
1	8				uh done and sent	6*	ack-done
1	9		done, sent			8	translation-l

Direct Translations: Uses the same or synonymous words, where the translation is applicable in any physical or conversational context.

Landmark Translations: Refers to a unique landmark name known only to members of the right floor.

3. SCHEMA EXTENSIONS : SITUATED AND DEFAULT TRANSLATION EXTENSIONS

TU	ID	Participant (Audio Stream 1)	DM -> Participant (Chat Room 1)	DM-> RN (Chat Room 2)	RN (Audio Stream 2)	Ante- cedent	Relation- Type
1	1	turn east ninety degrees					
1	2	and travel three feet				1	continue
1	3		processing. . .			2*	processing
1	4			turn left 90 degrees		1	translation-r- situated
1	5			then...		4	link-next
1	6			move forward 3 feet		2	translation-r- default
1	7		turning...			1	ack-doing
1	8		moving...			2	
1	8				done	6*	ack-done
1	9		done			9	translation-l

Situated Translations: Synonymous with original instruction only in the current physical context, but does not specify a unique landmark.

Default Translations: Supplements information by relying on some default assumption related to a robot behavior or capability

3. SCHEMA EXTENSIONS : HISTORY TRANSLATION EXTENSION

TU	ID	Participant (Audio Stream 1)	DM -> Participant (Chat Room 1)	DM-> RN (Chat Room 2)	RN (Audio Stream 2)	Ante- cedent	Relation- Type
1	1		You often ask for images at the end of movement instructions. Should I send one each time?				
1	2	yes				1	offer-accept
2	3	back up five feet					
2	4			back up 5 feet		3	translation-r-direct
2	5			send image		3	translation-r-history
2	7		executing...			3	ack-doing

History Translations: All or part of the translation is only relevant given the dialogue history, in which it was established that a certain instruction should be interpreted in a particular way.

3. SCHEMA EXTENSIONS : CONTEXTUAL TRANSLATION, PREPARATORY ACKNOWLEDGMENTS

TU	ID	Participant (Audio Stream 1)	DM -> Participant (Chat Room 1)	DM-> RN (Chat Room 2)	RN (Audio Stream 2)	Ante- cedent	Relation- Type
1	1	take a picture of the wall on your left					
1	3		processing. . .			1	processing
1	4			move to left wall		1	translation-r- contextual- partial
1	6			send image		4	continue
1	7		moving. . .			1	ack-doing- prep
1	8				done and sent	6*	ack-done
1	9		done, sent			8	translation-l

Underspecified, Contextual Translations: Draws upon situational or conversational context, but precisely what contextual information is being used is unclear, underspecified, or there are two or more factors.

Acknowledgment – Doing/Will-Comply Preparation: Speaker understands the command and a preparation step required for compliance with the command is underway (doing) or will be done (will-comply).

TALK OUTLINE

Goal: Extend our *multi-floor* dialogue annotation schema to account for features of *situated* dialogue—interpretation draws upon info from physical environment, conversational history, robot's physical form, etc.

1. Multi-floor dialogue

- Introduction
- 2018 unmodified annotation schema

2. Situated dialogue

- Human-robot dialogue corpus
- Strengths & weaknesses of original schema annotations as training data

3. Schema Extensions (Paper Focus)

- uniquely mark language that must be grounded to situational context

4. Annotated Corpus:

- Analysis of type frequencies
- Inter-Annotator Agreement

5. Conclusions & Future Work

4. ANNOTATED CORPUS: ANALYSIS OF TYPE FREQUENCIES

Corpus Overview:

- 168 human-robot dialogues annotated, validated
- Total of 40,873 relations

Super-Type Relations Frequencies:

- 36.4% Acknowledgment super-type
- 36.5% Translation super-type

New Relation Types Frequencies:

- 70% Direct Translations (no situated language)
- 30% have situated language
- New preparatory acknowledgments have small, but critical impact

Relation	
Translation-r	
situated	Direct
	Direct-partial
	Contextual
	Contextual-partial
	Landmark
	Landmark-partial
	Situated
	Situated-partial
	History
	History-partial
	Default
	Default-partial
Updated Ack Types	
situated	Will-comply
	Doing
	Will-comply-prep
	Doing-prep

Table 5: Frequencies and % of updated relations.

4. ANNOTATED CORPUS: INTER-ANNOTATOR AGREEMENT

Reliability measured through
Inter-Annotator Agreement (IAA)

- Comparable or higher IAA than original, unmodified schema
- New annotation categories are clearly identifiable

Markable Type	Agreement		Distance Metric
	Unmodified Schema	Modified Schema	
Antecedents	0.72–0.82	0.79- 0.94	Nominal ^a
Relation Types	0.77–0.89	0.83- 0.93	Nominal ^a
Transaction Units	0.48– 0.93	0.65-0.85	MASt ^b

^aKrippendorff (1980) ^bPassonneau (2006)

Table 6: IAA of the original, unmodified schema of Traum et al. (2018) and our modified schema.

5. CONCLUSIONS & FUTURE WORK

Extended multi-floor, multi-party dialogue structure annotations to uniquely mark *situated dialogue*

- Prevents invalid associations of NL - execution behavior in training data
- Critical step in exploration of how to relate and ground language to the context

Ongoing: Bringing together dialogue structure & propositional content with Dialogue-AMR
