Langage, Aix-Marseille University

Why laughter?

- We laugh a lot: laughter can make up to 17% of conversation.*
- It is social: we are 30 times more likely[†] to laugh in presence of others.
- Kids laugh before they learn to speak; laughter can be informative about their development.[‡]

‡ Mazzocconi, C., & Ginzburg, J. (2020). *Laughter growing up*. In Laughter and Other Non-Verbal Vocalisations Workshop: Proceedings (2020).

What is laughter?

- Laughter is not the same as humour.
- Laughter can convey a wide spectrum of emotions: from embarrassment to joy.
- Laughter can express (or interplay with) a communicative intent.
- Laughter can be a subject of clarification request.*

* Mazzocconi, C., Maraev, V., & Ginzburg, J. (2018). *Laughter Repair*. In Proceedings of the 22nd Workshop on the Semantics and Pragmatics of Dialogue. Aix-en-Provence, France.

Communicative intent

- Laughter can help determining sincerity of an utterance (e.g. sarcasm).*
- Listeners can be influenced towards non-literal interpretation of sentences accompanied by laughter.†
- We explore the role of laughter in **attributing communicative intents to utterances.**

* Tepperman, J., Traum, D., & Narayanan, S. (2006). 'Yeah right': sarcasm recognition for spoken dialogue systems. In , Ninth International Conference on Spoken Language Processing.

† Bryant, G. A. (2016). *How do laughter and language interact?* In Proceedings of EVOLANG11.

The concept of a dialogue act (DA)

- based on Austin's concept of a **speech act***
- considers not only a propositional content of an utterance but also performed action
- **Dialogue act** is an extension of speech act, focussing on interaction.
- **Dialogue act recognition (DAR)** is task of labelling sequence of utterances with DAs.

* Austin, J. L. (1975). *How to do things with words*. Oxford university press.

Example SWDA-2827

Utterance	Dialogue act
A: Well, I'm the kind of cook that I don't normally measure things,	Statement-non-opinion (sd)
A: I just kind of throw them in	sd
A: and, you know, I don't to the point of, you know, measuring down to the exact amount that they say.	sd
B: That means that you are real cook.	Statement-opinion
A: <Laughter> Oh, is that what it means	Downplayer
A: Uh-huh.	Backchannel
A: <Laughter>	Non-verbal

In this work

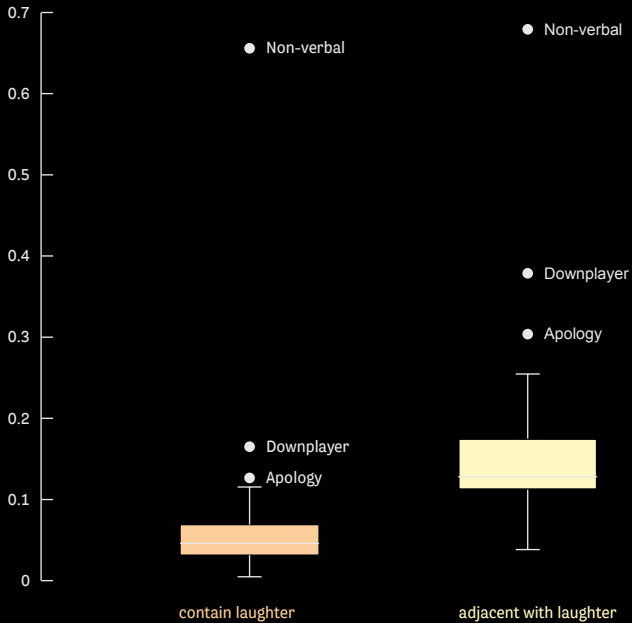

- We explore collocation of laughs and dialogue acts.
- We investigate whether laughter is helpful for the computational task of dialogue act recognition (DAR).

Data

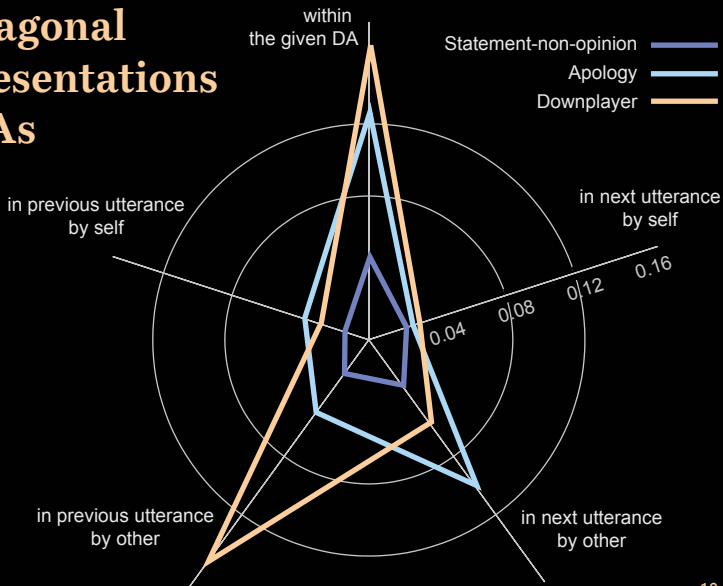

- Switchboard Dialogue Act Corpus (SWDA)*
- 220 dialogue acts according to DAMSL schema[†] clustered into 42 DAs
- 1155 conversations, 400k utterances, 3M tokens

* Jurafsky, D., Shriberg, E., & Biasca, D. (1997). Switchboard Dialog Act Corpus. International Computer Science Inst. Berkeley CA, Tech. Rep.

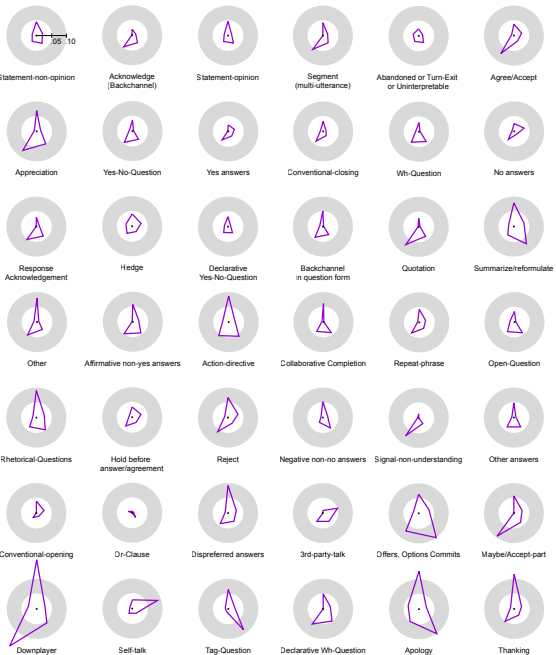

† Jurafsky, D., Shriberg, L., & Biasca, D. (1997). Switchboard SWBD-DAMSL Shallow-Discourse-Function Annotation Coders Manual.

Pentagonal representations of DAs

Modification and enrichment of current DA (with a degree of urgency)

- **smoothing/softening:** Action-directive, Reject, Dispreferred answer, Apology
- **stress positive disposition:** Appreciation, Downplayer, Thanking
- **cue less probable, non-literal meaning:** Rhetorical questions

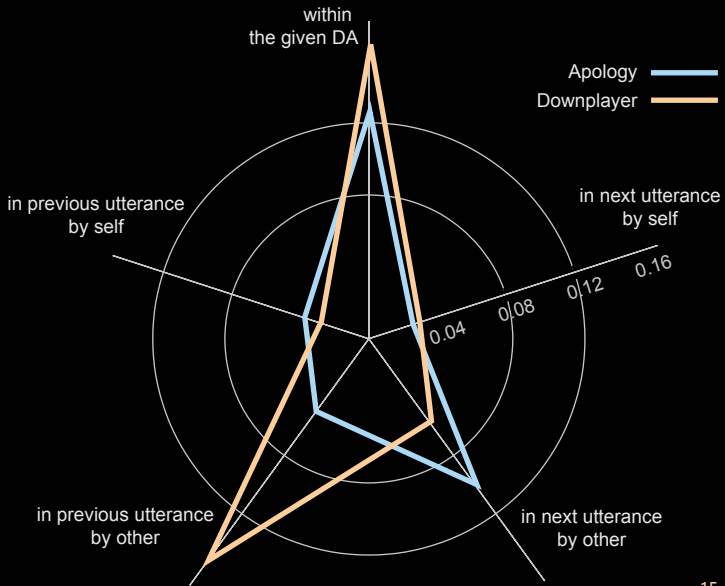

Benevolence induction

- Laughter can induce or invite a determinate response (Downplayer, Appreciation).
- Self-talk: signals 'social' incongruity of the action

A: Well, I don't have a Mexi-, - Statement n/o

A: I don't, shouldn't say that, Self-talk

A: I don't have an ethnic maid <laughter>. Statement n/o

Apology and Downplayer

A:	I'm sorry to keep you waiting #<laughter>.#	Apology
B:	Okay <laughter>	Downplayer
A:	Uh, I was calling from work	Statement n/o

- The positive effect of laughter is attained and successful.
- We also recently discovered that in case of social incongruity laughter is likely to be followed by gaze 'check'.*

* Mazzocconi C., Maraev V., Somahekarappa V., Howes C. *Looking for laughs: Gaze interaction with laughter pragmatics and coordination*, accepted at ICMI 2021

Intermediate conclusion

- Laughter is tightly related to dialogue information structure.
- ...should it then be an important cue for a computational model?

Dialogue act recognition model

- We are using BERT pre-trained on massive non-dialogical data (see Noble and Maraev, 2021).*

* Noble, B., & Maraev, V. (2021). *Large-scale text pre-training helps with dialogue act recognition, but not without fine-tuning*. In Proceedings of the 14th International Conference on Computational Semantics (IWCS) (pp. 166–172). 18

Results

	macro F1	accuracy
BERT-NL	36.48	76.00
BERT-L	36.75	76.60
BERT-L+OSNL	43.71	76.95
BERT-L+OSL	41.43	77.09

- OS = OpenSubtitles, 350M tokens, 0.3% laughter tokens

BERT-NL

BERT-L

Rhetorical questions

- are misclassified by **BERT-NL** as Wh-q.
- Laughter cancels seriousness and reduces commitment to literal meaning.*†

B:	Um, as far as spare time, they talked about,	Statement n/o
B:	I don't, + I think,	Statement n/o
B:	who has any spare time <laughter>?	Rhetorical q.

* Tepperman, J., Traum, D., & Narayanan, S. (2006). 'Yeah right': sarcasm recognition for spoken dialogue systems. In , Ninth International Conference on Spoken Language Processing.

† Ginzburg, J., Breitholtz, E., Cooper, R., Hough, J., & Tian, Y. (2015). Understanding Laughter. In , Proceedings of the 20th Amsterdam Colloquium (pp. 137-146). : .

What about non-verbals?

- What if our model was unaware of this class?
- We mask the outputs where the desired class was Non-verbal.
- We test on 659 non-verbals (413 of which contain laughters)
- Predicted: Acknowledge/Backchannel (76%), continuation of previous DA (11%)

Example

B: I would go from one side of the boat to the other, Statement n/o

B: and, uh, +

☞ A: <laughter> Backchannel

B: the, uh, the party boat captain could not understand, you know, +

B: he even, even he started baiting my hook <laughter>, Statement n/o

☞ A: <laughter> Backchannel

B: and holding, holding the, uh, the fishing rod. +

A: How funny, Appreciation

Conclusions

- Laughter is tightly related to dialogue information structure.
- Laughter is a valuable cue for DAR task (implications for NLU).
- Laughter can help disambiguating literal and non-literal interpretation (a struggle for many NLP tasks).
- Future models need **meaningful DAs for standalone laughs.**

Thank you!
